*It is requested that the purchaser will insert below the number of the volume, together with his Name and full Address in order that information affecting the Code or cabling in general may be forwarded to him; this will be done without charge.*

## IMPERIAL COMBINATION CODE.

+  
— — — — —

### CERTIFICATE.

The Telegraph Administrations of the United Kingdom, France and Germany, in accordance with the charge assigned to them by the International Telegraph Union, have examined in the name of the Union the Code entitled

### IMPERIAL COMBINATION CODE.

They certify that although a certain proportion of the expressions in the said Code give rise to difficulty in pronunciation, the Code must be considered, on the whole, as conforming to the conditions fixed by paragraph 2 of Article VIII of the International Regulations.

\* \* \* \* \*

On behalf of the Telegraph Administrations of the United Kingdom, France and Germany.

*(Signed)* E. W. FARNALL.

GENERAL POST OFFICE,  
LONDON,

31st July, 1913.

# RUBBER EDITION.

NOTE.—The Cipher Words used in this Code are taken, by permission, from Whitelaw's one thousand millions of pronounceable words, which are strictly copyright, and which, since the new facility has come into force, have been regularly and correctly transmitted by the Cable Companies.

ENGLAND.

## PREFACE TO THE RUBBER EDITION.

A CONSIDERABLE number of the Imperial Combination Code has been sold to Companies and individuals connected with the Plantation Rubber Industry. As, however, the Code contained very few phrases suitable for Rubber, it was considered advisable, in the interests of those using the Code for cabling matter connected with Rubber, to reprint a considerable portion of the Imperial Code eliminating a number of mining phrases and substituting those particularly applicable to Rubber. This has been done in the Rubber Edition. These phrases have been submitted to and approved of by several of the highest authorities connected with the article. The author has therefore every reason to believe that all legitimate requirements have been met, but should it be desired to include any private matter, the large number of blank ciphers on pages 159, 171, 172, 222 to 227 and elsewhere should prove sufficient for the purpose.

Various articles of produce cultivated with Rubber have been referred to, particularly in the monthly returns on pages 166 to 168. Pepper, in these returns, has been given in lbs., but should piculs be preferred the alteration of lbs. to piculs will be sufficient. Should such an alteration be made care must be taken that all copies agree.

This Edition will prove as invaluable to those connected with the promotion of Rubber Companies as the General Edition has done to promoters of Gold Mining and kindred Companies.

*It will be found that this Code will pay for itself in a very short time.*

The General Preface on the opposite page will explain the working of the Code.

The Rubber Edition includes a terminal order to the ciphers employed.

# P R E F A C E.

---

SOME little apology, perhaps, is needed for the introduction of this Code, so many works of this nature being before the public, yet in view of the large number subscribed for before publication, it would appear that after all a Code arranged as this one is, and by the author of so many well-known and successful codes, will be welcome.

Unlike most codes, it does not profess to treat on every subject under the sun, a work attempting this must of necessity be very imperfect.

This Code is confined primarily to mining, company promoting, financial and stock exchange matters, as well as for the *verbatim* transmission of speeches made at company meetings, reports and other similar subjects. One on the same lines for shipping purposes is now in a forward state of preparation. The principle of compilation is very simple. Every word likely to be used in commercial telegraphing, it is believed, has been embodied in the Code, and a large number of simple sentences run out under their respective headings. Carrying out the principle originated by the author some twenty years ago (and which has received the sincere flattery of imitation), the auxiliary verbs with all their likely inflections have been carried out to the extreme. It is believed that no series of simple sentences or combinations of the auxiliary verbs has been omitted.

Over 38,000 half words have been employed, but owing to the arrangement adopted, this number has been vastly increased. As a rule the infinitive, past and present participles are given under one cipher word. No mistake can take place in deciding which of these forms should be used when read with the context. Should, however there be any doubt, provision has been made on page 33 under the ciphers DUHTE to DUJCE to indicate which form should be read. The verbs which are in more common use have been run out separately—for example, Buy, Sell, &c. It will be observed that synonymous terms are printed in the Code, but without a cipher, a reference being made in the more common forms usually employed.

The arrangement throughout, excepting in two cases, is strictly alphabetical, the exceptions being "Negotiations" and "Returns." It was found undesirable to separate these two in the same way in which the rest of the Code has been compiled. All phrases under their leading word have been arranged in strict alphabetical order and unnecessary verbiage has been omitted, as in telegraphing an idea is required to be transmitted, not a number of unnecessary words.

The cipher words, as will be observed, consist of five letters *only*, and inasmuch as each combination of five letters is pronounceable, the words are equally pronounceable when any two are joined together; they conform in this respect as well as in all others to the regulations of the Telegraph Convention of 1903. The author has been most fortunate in receiving permission from the proprietor of Whitelaw's one thousand million words to make use of the ciphers therein contained. The importance of this concession need hardly be pointed out, as Whitelaw's words have a world-wide reputation for safety in transmission and have been compiled with a strict regard to all the regulations issued by the Telegraph Convention.

As already pointed out the ciphers consist of five letters only. Inasmuch as ten letters may be transmitted any two of the cipher words of five letters may be read together, consequently any two phrases in this code may be sent in one word. Further, as the ten letters thus formed are made-up or artificial words they differ immensely from the legitimate words which up to the last Convention were obligatory. This Code therefore may be used in conjunction with any other code using legitimate words without fear of misunderstanding.

The author has specially compiled this, the "Imperial" Code, for use with his other published codes namely, Broomhall's Comprehensive Cipher Code, The Standard Shipping Code, The Arbitrage Code and others, and it is strongly urged upon purchasers that should they require an ordinary phrase Code for use with this, one of the above-mentioned most successful works should be adopted.

Occasions may occur when only one cipher word of five letters is required, but it is considered far better and far safer if in every case ten letters be sent, provision having been made for completing the word of ten letters, the word ABABY being allocated for that purpose; this word has no meaning, it simply serves to make a complete one of ten letters. There are several reasons why such a course should be adopted, the principal one being that as each word in this code will consist of ten letters it makes it all the more distinguishable from words taken from codes using genuine words, and mutilations are the more easily traced.

Examples of the working of this Code are not given here, as a moment's consideration will show that such examples may be quite worthless for the purpose of illustrating the usefulness of the work, as there is nothing simpler than to compile examples which shall appear to illustrate the work but which have been compiled with the object of fitting in with the Code, or even a Code may be compiled with a view of transmitting a message previously picked out. The author would prefer that the profuse examples manufactured by others should be taken as a test of this Code, but particularly that messages (*not already sent in another code and thus mutilated*) should be compiled with the aid of the Imperial Code and compared with any similar work, regard being had to the purpose for which this work is compiled.

A Terminational Order of the ciphers employed is bound in with the Code.

This Terminational Order will be found invaluable for detecting mutilations.

---

NOTE.—The cipher words used in this Code are taken, by permission, from Whitelaw's one thousand millions of pronounceable words, which are strictly copyright, and which, since the new facility has come into force, have been regularly and correctly transmitted by the Cable Companies.

NOTE.—Pages **131** to **178**, both inclusive, in this Edition differ from the same pages in the Imperial Combination Code.

ABABY—This cipher is for use only when it is desired to complete a code word of 10 letters. It has no meaning. See Preface.
